

CONSENT FOR CBCT (cone beam CT)

Dr. Todd has recommended that a volumetric x-ray be taken to further evaluate my dental condition. The CBCT allows for accurate measurements and three-dimensional imaging (unlike two dimensional x-rays). Dr. Todd would not perform the CBCT if he felt it was not necessary. The CBCT is frequently used in implants reconstruction, impacted teeth, and for evaluation of pathology.

I understand that **some insurances cover the cost of this x-ray and some do not**. The cost of the initial CBCT is \$250.
